TABLE III—SUMMARY OF OBSERVATIONS AT FIXED HOURS—JULY, 1961 (ASADHA 10—SAVANA 9, 1883 SAKA)

| Division and station | Hour of observation I.S.T. | Station elevation in metres | Mean pressure in millibars | | | Mean temperature in °C | | | Cloud amount (Octas) | | | Wind speed (Km. p.h.) | | | No. of observations | | | | | | | | | | | | | |
|-----------------------------------|----------------------------|-----------------------------|--|----------|----------|------------------------|--------------------------|---------------------|-----------------------|-------------|-----------------------|-----------------------|----------|---------|---------------------|----|----|------------------------|----|----|----------------|----|------|----------|----|----|----|---|
| | | | At mean sea level or height in g.p.m. of nearest standard isobaric level | | | At station level | | | Departure from normal | | | Departure from normal | | | Mean amount | | | Wind velocity per hour | | | Wind direction | | | | | | | |
| | | | At station level | Dry bulb | Wet bulb | Dew point | Vapour pressure in mb.s. | Relative humidity % | Departure from normal | Mean amount | Departure from normal | 62 or more | 20 to 61 | 1 to 19 | N | NE | E | SE | S | SW | W | NW | Calm | Variable | | | | |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 | 21 | 22 | 23 | 24 | 25 | 26 | 27 | 28 | |

*Data included under 'Nepal'.

†Observation for 27 days.

††Observation for 28 days.

MONTHLY MEANS OF UPPER WINDS

During the month, observations of velocity and direction of upper winds were made at 53 stations in India. Out of these, at 41 stations all the observations, were taken by means of pilot balloons and at 12 stations some observations were made by means of pilot balloons while the other observations by the radiowind method. Particulars of these stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the table overleaf. All radiowind ascents have been indicated by means of an asterisk(*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data upto 9.0 km. a.m.s.l. are given under Table IV and data above 9.0 km. a.m.s.l. under Table V.

In Tables IV and V :

n—represents the number of observations;

V—represents the mean wind speed in metres per second; irrespective of direction;

v—represents the resultant mean velocity in metres per second;

D—represents the direction of the resultant mean wind in degrees East of North.

Mean and resultant winds are given in this publication for the following heights :

Surface, 0.15 km. a.g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0 and 36.0 km. a.m.s.l. Of these the levels 1.5, 3.0, 5.4, 7.2, 9.0, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0 and 30.0 km. a.m.s.l. are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150, 100, 70, 50, 30, 20 and 10 mb. respectively.

RADIOSONDE DATA

July 1961 (Asadha 10—Sravana 9, 1883 Saka)

During the month, observations of upper air temperature, pressure and humidity were made at 13 stations in India as given in the list below. For a detailed description of the instruments used, a reference may be made to the I.M.D. Scientific Notes Nos. 112 and 113 (Volume IX).

LIST OF RADIOSONDE STATIONS IN INDIA

| S. No. | Name of Station | Type of instrument used | Date of starting | Hours of routine observations in G.M.T. during the month | Remarks |
|--------|-----------------|-------------------------|---------------------|--|--|
| 1 | Allahabad | Clock type | 1st October, 1944 | 00 and 12 | |
| 2 | Bangalore | Fan type | 10th March, 1961 | 00 and 12 | |
| 3 | Bombay | Clock type | 7th September, 1954 | 00 and 12 | |
| 4 | Calcutta | Clock type | 13th December, 1946 | 00 and 12 | Fan type used from 13th December, 1946 to 30th November, 1947. |

| 10 | .. | .. | .. | .. | .. | .. |

NOTE : Number of observations refer to those of dynamic height.
 Means are not worked out for temperature and dew point for the 100mb. surface and for dew point for standard pressure surfaces with temperatures less than 273°A.
 Means are not worked out for less than five observations at standard pressure surfaces.

MONTHLY MEAN CONSTANT PRESSURE CHARTS
JULY-1961

I. Met.D.

Plate

RESULTANT WIND — 5 Knots, — 10 Knots, — 50 Knots.

----- Isotherms in degrees centigrade ----- Contours in geopotential metres.

The mean maximum temperature was below normal in the Punjab(I) and normal over the rest of the country outside Himachal Pradesh.

The mean minimum temperature was normal over the country outside Himachal Pradesh.

The mean relative humidity in the morning was above normal in Uttar Pradesh, the Punjab(I), Gujarat Region and Interior Mysore State, below normal in Jammu and Kashmir and normal over the rest of the country outside Himachal Pradesh.

The mean cloud amount in the morning was above normal in east Uttar Pradesh, the Punjab (I), west Rajasthan, the Madras State, north Interior Mysore and the Arabian Sea Islands and normal over the rest of the country outside Himachal Pradesh.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 31 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. IST of the date noted in the succeeding column. Similarly the heaviest fall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hrs. IST of the date given in the succeeding column.

TABLE III—SUMMARY OF OBSERVATIONS AT FIXED HOURS—AUGUST 1961 (SRAVANA 10—BHADRA 9, 1883 SAKA)

TABLE III—SUMMARY OF OBSERVATIONS AT FIXED HOURS—AUGUST, 1961 (SRAVANA 10—BHADRA 9, 1883 SAKA)

MONTHLY MEANS OF UPPER WINDS

August, 1961 (Sravana 10—Bhadra 9, 1883 Saka)

During the month, observations of velocity and direction of upper winds were made at 53 stations in India. Out of these, at 41 stations all the observations were taken by means of pilot balloons and at 12 stations some observations were made by means of pilot balloons while the other observations by the radiowind method. Particulars of the stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the table overleaf. All radiowind ascents have been indicated by means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data upto 9.0 km. a. m. s. l. are given under Table IV and data above 9.0 km. a. m. s. l. under Table V.

In Tables IV and V :

n—represents the number of observations,

V—represents the mean wind speed in metres per second* irrespective of direction,

v—represents the resultant mean velocity in metres per second*,

D—represents the direction of the resultant mean wind in degrees East of North.

Mean and resultant winds are given in this publication for the following heights :

Surface, 0·15 km. a. g., 0·3, 0·6, 0·9, 1·5, 2·1, 3·0, 3·6, 4·5, 5·4, 6·0, 7·2, 9·0, 10·5, 12·0, 14·1, 16·2, 18·0, 21·0, 24·0, 27·0, 30·0, 33·0 and 36·0 km. a. m. s. l. Of these, the levels 1·5, 3·0, 5·4, 7·2, 9·0, 12·0, 14·1, 16·2, 18·0, 21·0, 24·0, 27·0 and 30·0 km. a. m. s. l. are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150, 100, 70, 50, 30, 20 and 10 mb. respectively.

*Values obtained by converting the original data in knots.

Particulars of Pilot Balloon and Rawin Stations in India

| Station | Lat. N | Long. E | Height of Anemometer head a. m. s. l. in metres | Date of opening | Approximate times of flights (I.S.T.) | | |

TABLE V—MONTHLY MEAN DIRECTIONS AND VELOCITIES OF UPPER WINDS

Winds above 9·0 Km. above mean sea level

August 1961 (Sravana 10—Bhadra 9, 1883 Saka)

RADIOSONDE DATA

During the month, observations of upper air temperature, pressure and humidity were made at 13 stations in India as given in the list below. For a detailed description of the instruments used, a reference may be made to the I. M. D. Scientific Notes Nos. 112 and 113 (Volume IX).

LIST OF RADIOSONDE STATIONS IN INDIA

| S. No. | Name of station | Type of instrument used | Date of starting | Hours of routine observations in GMT during the month | Remarks |
|--------|-----------------|-------------------------|--------------------|---|--|
| 1 | Ahmedabad | Fan type | 2nd July 1961 | 00 and 12 | |
| 2 | Allahabad | Clock type | 1st October 1944 | 00 and 12 | |
| 3 | Baagolore | Fan type | 10th March 1961 | 00 and 12 | |
| 4 | Bombay | Clock type | 7th September 1954 | 00 and 12 | |
| 5 | Calcutta | Clock type | 13th December 1946 | 00 and 12 | Fan type used from 13th December, 1946 to 30th November, 1947. |
| 6 | Gauhati | Clock type | 22nd July 1955 | 00 and 12 | |
| 7 | Jodhpur | Clock type | 17th April 1946 | 00 and 12 | |
| 8 | Madras | Fan type | 29th June 1946 | 00 and 12 | |
| 9 | Nagpur | Fan type | 1st October 1946 | 00 and 12 | |
| 10 | New Delhi | Clock type | 3rd December 1943 | 00 and 12 | |
| 11 | Port Blair | Fan type | 4th December 1946 | 00 and 12 | |
| 12 | Trivandrum | Fan type | 1st July 1947 | 00 and 12 | |
| 13 | Vizakapatnam | Fan type | 8th December 1946 | 00 and 12 | |

INDIA WEATHER REVIEW

Monthly Weather Report
September

Published by authority of the Government of India

Chief feature—

Formation of a series of depressions over the head Bay of Bengal and their westnorthwesterly movement, attended by spells of heavy rains and floods in the central parts of the country.

A well marked low pressure area which developed over the northwest Bay of Bengal and adjoining coast on 31st August moved in a westnorthwesterly direction and lay over Rajasthan and neighbourhood on 6th September. Without appreciable movement, it weakened and became unimportant by 9th. In association with it, active or vigorous monsoon conditions prevailed in east Madhya Pradesh and adjoining Orissa from 1st to 3rd September, in Vidarbha on 3rd and in west Madhya Pradesh and east Rajasthan from 3rd to 5th. Gondia reported 28 cm of rain and Sambalpur 22 cm on 2nd, Mount Abu 20 cm on 5th and 16 cm on 6th and Jhalawar and Neemuch 15 cm each on 5th. According to press reports, floods occurred in the rivers of Madhya Pradesh and Vidarbha. Between Gondia and Gangazari, one hundred feet of railway line were washed away by the flood waters.

Another low pressure area appeared over the head Bay of Bengal on 5th and concentrated into a deep depression which was centred near Kharagpur on the morning of 6th. With undiminished intensity, it reached Sind on 13th and emerged into the northeast Arabian Sea on 14th. Moving in a westsouthwesterly direction, it moved away across Saudi Arabian coast by 17th. Very heavy rain was recorded to the south of the track of this deep depression over the Indian territory. Cuttack reported 21 cm and Balasore 18 cm on 7th, Pachmarhi 38 cm, Jaisalmer 32 cm, Betul 24 cm and Hoshangabad 17 cm on 9th and Mount Abu 33 cm on 13th. According to press reports, this spell of very heavy rains caused large scale floods in Orissa, Vidarbha, southwest Madhya Pradesh and Gujarat State. An area of approximately 2,500 sq. miles with a population of over 10 lakhs was affected by floods in Orissa. Several houses in the low-lying areas of the Cuttack City collapsed. The river Narbada was in serious floods. The entire Rann of Kutch was reported to be under water. Landslides occurred on the road from Abu Road to Mount Abu.

A well marked low formed over the northeast Bay of Bengal on 10th. It rapidly intensified into a cyclonic storm and lay with centre about 100 kms southsouthwest of Cox's Bazaar on the morning of 12th. Moving westnorthwestwards, it crossed coast near Contai on 13th morning, weakened and lay as a deep depression over northwest Orissa and neighbourhood on 14th and over central Madhya Pradesh on 15th. Recurring northwards, it weakened and filled up over Uttar Pradesh by 18th. In association with it, active to vigorous monsoon conditions prevailed in coastal West Bengal on 13th, in north Orissa on 14th, in east Madhya Pradesh on 14th and 15th and in west Madhya Pradesh and Vidarbha on 15th and 16th. Some noteworthy amounts of rainfall were : Saugor Island 15 cm on 13th, Raigarh 21 cm on 14th, Pachmarhi 32 cm on 15th and Betul 27 cm on 16th. As a result of heavy rains, the rivers in Vidarbha and Madhya Pradesh burst their banks and caused devastating floods. At Mortakke Railway bridge near Barwaha, the river Narbada registered a level of 571 ft. on 16th-17th September 1961, against the previous record of 563 ft. The floods in Vidarbha were reported to have caused damage to the extent of about 4 crore rupees.

A depression formed over the head Bay of Bengal on 22nd, crossed coast between Balasore and Contai and filled up over north Madhya Pradesh and neighbourhood by 28th. In association with it, the monsoon was active in Gangetic West Bengal on 22nd, in Bihar State on 23rd, in east Madhya Pradesh on 22nd and 23rd, in east Uttar Pradesh on 24th and active or vigorous in west Madhya Pradesh from 25th to 28th. Bhopal reported 23 cm on 20th and Ratlam 15 cm on 28th. As a result of persistent heavy rains in west Madhya Pradesh, the rivers Chambal and Narbada were in floods.

Another depression developed over northwest Bay of Bengal on 27th, became deep by 28th. It crossed the Sunderbans coast the same day and lay over extreme northeast Madhya Pradesh and adjoining Bihar State on 30th. Very heavy rain occurred near the track of this deep depression. Saugor Island reported 30 cm, Contai 21 cm and Balasore 20 cm on 29th.

The rainfall for the month was in large deficit in Rayalaseema and Interior Mysore State, in moderate deficit in Sub-Himalayan West Bengal, east Uttar Pradesh, the Punjab (I), Jammu & Kashmir, the Konkan, Madhya Maharashtra and Marathwada, in slight deficit in Assam, Bihar plains and Telangana and normal in west Uttar Pradesh, coastal Andhra Pradesh and the Madras State. It was in moderate excess in Gangetic West Bengal, Bihar Plateau and the Arabian Sea Islands and in large excess over the rest of the country outside Himachal Pradesh.

The mean maximum temperature was above normal in Jammu and Kashmir, below normal in Orissa, Rajasthan, Madhya Pradesh, Gujarat State and Vidarbha and normal over the rest of the country outside Himachal Pradesh.

The mean minimum temperature was above normal in the Punjab(I), Jammu and Kashmir and west Rajasthan and normal over the rest of the country outside Himachal Pradesh.

The mean relative humidity in the morning was above normal in west Uttar Pradesh, the Punjab(I), Rajasthan, west Madhya Pradesh and Gujarat State, below normal in Jammu and Kashmir and normal over the rest of the country outside Himachal Pradesh.

The mean cloud amount in the morning was above normal in Orissa, Bihar Plateau, Uttar Pradesh, Rajasthan, Madhya Pradesh, Gujarat State, Marathwada, Vidarbha, the Madras State, coastal and north Interior Mysore and the Arabian Sea Islands and normal over the rest of the country outside Himachal Pradesh.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 31 sub-divisions. The stations whose Observations are used for preparing these means are given in the subsequent Tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. IST of the date noted in the succeeding column. Similarly the heaviest fall in 24 hours for any Station denotes the amount recorded during the 24 hours ending at 0830 hrs. IST of the date given in the succeeding column.

POONA 5,

The 27th November, 1961.

R. ANANTHAKRISHNAN,

for Director General of Observatories.

TABLE III.—SUMMARY OF OBSERVATIONS AT FIXED HOURS—SEPTEMBER, 1961 (BHADRA 10—ASVINA 8, 1883 SAKA).

(B) Register not received

*Data not available.

All data included under "Nepal"

**Observations for 16 days.

Observations for 29 days.

MONTHLY MEANS OF UPPER WINDS

September 1961 (Bhadra 10—Asvina 8, 1883 Saka)

During the month, observations of velocity and direction of upper winds were made at 53 stations in India. Out of these, at 41 stations all the observations were taken by means of pilot balloons and at 12 stations some observations were made by means of pilot balloons while the other observations by the radiowind method. Particulars of the stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the table overleaf. All radiowind ascents have been indicated by means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data up to 9.0 km. a.m.s.l. are given under Table IV and data above 9.0 km. a.m.s.l. under Table V.

In Tables IV and V :

n—represents the number of observations;

V—represents the mean wind speed in metres per second irrespective of direction;

v—represents the resultant mean velocity in metres per second;

D—represents the direction of the resultant mean wind in degrees East of North.

Mean and resultant winds are given in this publication for the following heights :

Surface, 0.15 km.a.g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0 and 36.0 km. a.m.s.l. Of these, the levels 1.5, 3.0, 5.4, 7.2, 9.0, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0 and 30.0 km. a.m.s.l. are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150, 100, 70, 50, 30, 20, & 10 mb. respectively.

RADIOSONDE DATA

September 1961 (Bhadra 10—Asvina 8, 1863 Saka)

During the month, observations of upper air temperature, pressure and humidity were made at 13 stations in India as given in the list below. For a detailed description of the instruments used, a reference may be made to the I.M.D. Scientific Notes Nos. 112 and 113 (Volume IX).

LIST OF RADIOSONDE STATIONS IN INDIA

| S. No. | Name of station | Type of instrument used | Date of starting | Hours of routine observations in G.M.T. during the month | Remarks |
|--------|-----------------|-------------------------|--------------------|--|--|
| 1 | Ahmedabad | Fan type | 20th July 1961 | 00 and 12 | |
| 2 | Allahabad | Clock type | 1st October 1944 | 00 and 12 | |
| 3 | Bangalore | Fan type | 10th March 1961 | 00 and 12 | |
| 4 | Bombay | Clock type | 7th September 1954 | 00 and 12 | |
| 5 | Calcutta | Clock type | 13th December 1946 | 00 and 12 | Fan type used from 13-12-46 to 30-11-47. |
| 6 | Gauhati | Clock type | 22nd July 1955 | 00 and 12 | |
| 7 | Jedhpur | Clock type | 17th April 1946 | 00 and 12 | |
| 8 | Madras | Fan type | 29th June 1946 | 00 and 12 | |
| 9 | Nagpur | Fan type | 1st October 1946 | 00 and 12 | |
| 10 | New Delhi | Clock type | 3rd December 1943 | 00 and 12 | |
| 11 | Port Blair | Fan type | 4th December 1946 | 00 and 12 | |
| 12 | Trivandrum | Fan type | 1st July 1947 | 00 and 12 | |
| 13 | Visakhapatnam | Fan type | 8th December 1946 | 00 and 12 | |

Note : Number of observation refer to those of dynamic height.

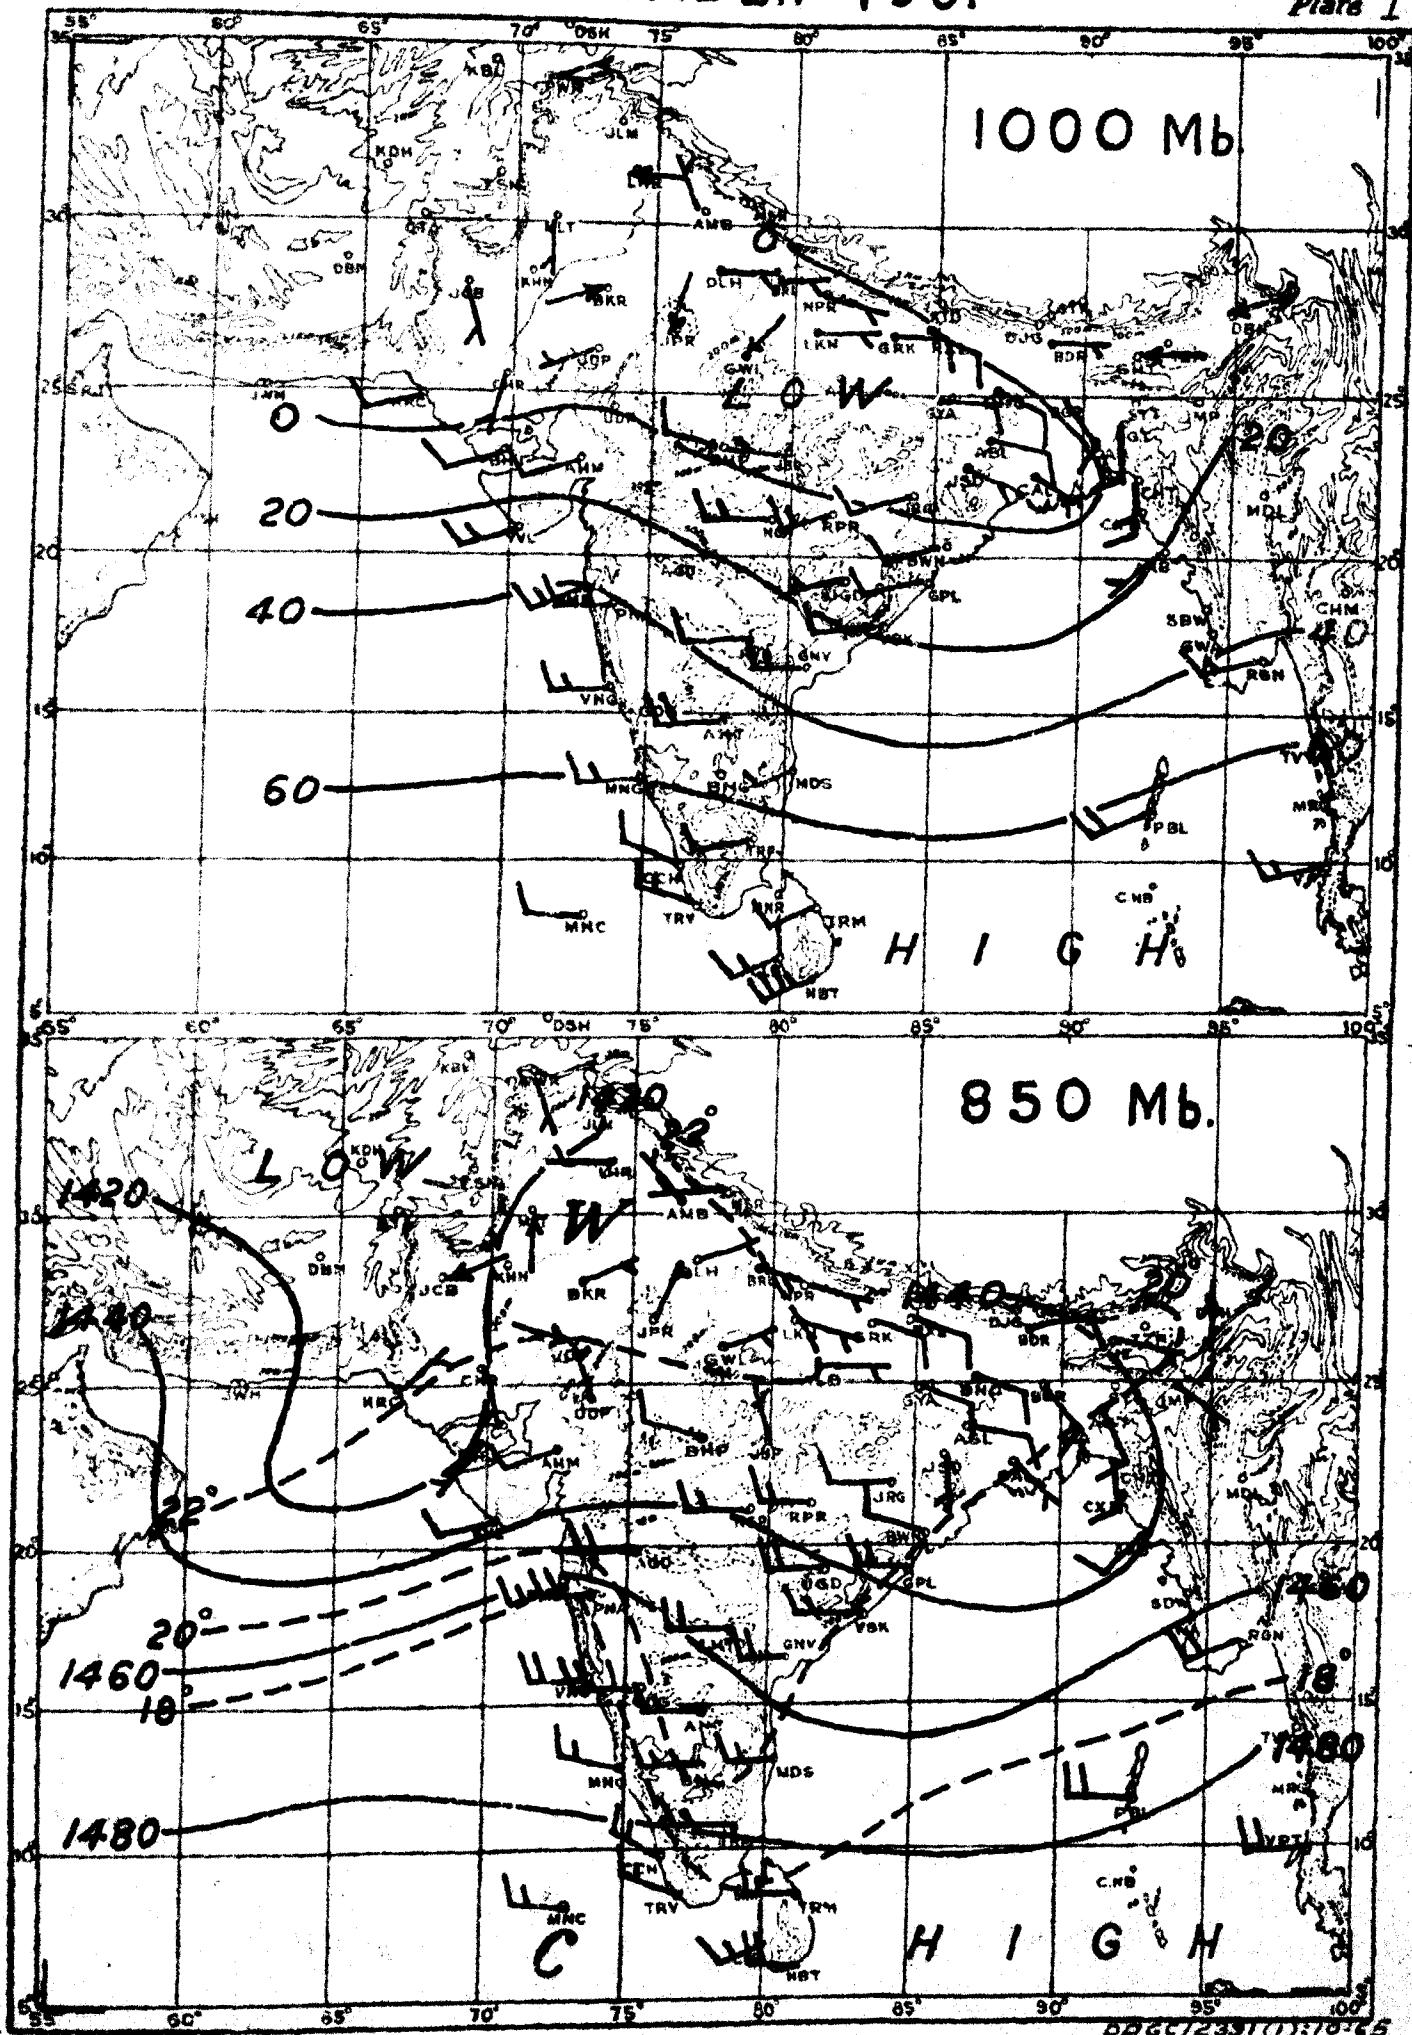

Means are not worked out for temperature and dew point for the 1000 mb. surface and for dew point for standard pressure surfaces with temperature less than 273°A.

Means are not worked out for less than five observations at standard pressure surfaces.

INDIA WEATHER REVIEW, 1961

Monthly Weather Report

October

Published by authority of the Government of India

Chief feature :

- (i) Severe floods in Bihar during the beginning of the month and in Uttar Pradesh during the second week in association with the movement of two deep depressions;
- (ii) Late withdrawal of monsoon from the country;
- and (iii) Formation and movement of a depression in the Bay of Bengal during the last week of the month.

A deep depression which moved inland from the northwest Bay of Bengal lay over the extreme northeast Madhya Pradesh and adjoining Bihar State on 30th September. It recovered eastnortheastwards and lay as a depression over Bihar Plateau on 2nd October. It weakened into a low pressure area over Bihar Plains on 3rd. Moving westnorthwestwards, thereafter, it filled up over the central parts of Uttar Pradesh by 6th. The very heavy rains associated with the depression caused disastrous floods in Bihar which took a toll of nearly nine hundred human lives, besides dislocating railway traffic in Bihar state and West Bengal. Some of the noteworthy amounts of rainfall reported were : Ambikapur 21 cm on 1st, Sabour 19 cm and Kalimpong 13 cm on 2nd and Darbhanga 14 cm on 4th.

A low pressure area from the Bay of Bengal moved across the Circars coast into Vidarbha and Telangana. It concentrated into a depression on 9th with centre near Adilabad. It moved very slowly northwestwards and became a deep depression centered about 70 kms northwest of Amravati on 11th. Later, it recurved northeastwards and was centered near Kanpur on 13th morning. It weakened very rapidly and filled up the next day. In association with this depression the monsoon strengthened over most parts of the country outside northwest India. Very heavy rains occurred in the north Peninsula, the central parts of the country and in Uttar Pradesh, the chief amounts being Khandala 13 cm on 8th and 35 cm on 9th, Parbhani 13 cm and Aurangabad 12 cm on 10th; Buldhana 16 cm on 11th; Orai 22 cm and Lucknow 14 cm on 13th and Ballia 14 cm and Kheri Lakhimpur 12 cm on 14th. The heavy rains led to severe flooding of rivers in Uttar Pradesh. More than fifty people lost their lives due to floods and house collapses and parts of Lucknow city were inundated by the flood waters of the Gomati river.

The monsoon withdrew from practically the whole of northwest India between 1st and 3rd October. Its further withdrawal got temporarily arrested due to the low pressure system mentioned in the previous paragraph. After the filling up this low, the monsoon withdrew from Uttar Pradesh, Bihar Plains, northeast and west Madhya Pradesh, Gujrat State and Maharashtra State by 18th. During the next few days, it withdrew further and was confined to the south Peninsula by 22nd. The withdrawal of the monsoon was generally a fortnight later than usual over the different parts of the country outside the south Peninsula.

A low pressure area from the east entered the Andaman Sea on 14th and moving northwestwards, it lay over the west central Bay of Bengal off the Circars coast on 18th Thereafter, it weakened and moved away westwards across the Peninsula. In association with it, a few falls of heavy rain occurred in the Bay Islands between 12th and 15th and in coastal Andhra Pradesh and neighbourhood between 16th and 19th. Nan Cowrie reported 7 cm of rain on 12th and 14 cm on 14th; Kondul 11 cm on 14th and 8 cm on 15th; Kakinada 8 cm on 16th; Jagdalpur 10 cm on 17th and Visakhapatnam 18 cm on 19.

"Copyright © 1961 by the Manager of Publications, Govt. of India, Delhi-8."

A low pressure wave from the east moved into the Andman Sea on 21st. It moved across the Comorin-Maldiv area on 24th and then into the southeast Arabian Sea. Under its influence, a low pressure area formed in the southeast Arabian Sea on 26th. Moving in a northeasterly direction, the low entered the Peninsula across north coastal Mysore and the south Konkan, moved into Bihar Plateau by 31st and filled up thereafter. Under its influence, maritime air from the south progressively penetrated into the area extending from Kerala and coastal Mysore to Gangetic West Bengal and gave a good spell of wet weather there. A few noteworthy amounts of rainfall reported were : Tondi 10 cm on 24th, Mangalore 12 cm on 25th, Hanamkonda 10 cm on 28th, Mangalore 11 cm on 29th, Contai 12 cm on 30th and Sandheads 10 cm on 31st.

A well marked low pressure area developed over the east central Bay of Bengal off the Arakan coast on 22nd. It moved northnorthwestwards and concentrated into a depression centred about 100 kms northwest of Akyab on 24th morning. Continuing to move in the same direction, it crossed coast close to Noakhali on the 25th night and weakened into a low pressure area over the southern divisions of East Pakistan on 26th morning. It recurved northeastwards, moved across lower Assam and became unimportant by 28th. The depression did not cause much weather over the Indian region; only scattered showers occurred in Assam between 24th and 28th.

The rainfall activity increased over the extreme south Peninsula towards the end of the month in association with the movement of an easterly wave across the south Peninsula on 30th. Punalur and Coonoor reported 8 cm of rain each on 29th and 30th respectively.

Two western disturbances moved across the country during the month. The first one lay over the Punjab (I) on 14th and moved away across the Punjab-Kumaon hills on 16th. It caused local showers in Himachal Pradesh and Jammu and Kashmir on 15th. The second one which was more active lay over the northern divisions of West Pakistan on 28th and over the Punjab on 29th. It moved away eastwards across the Western Himalayas on 2nd November. In association with it, local to fairly widespread rain or snow occurred in Jammu and Kashmir, Himachal Pradesh and the hills of the Punjab (I) and of west Uttar Pradesh on 30th and 31st. Bilaspur reported 6 cm of rain and Dharamsala, Dharampore and Roorkee 5 cm each on 30th.

The rainfall for the month was in moderate defect in Gujarat State, the Madras State and Kerala, in slight defect in Assam and Jammu and Kashmir and normal in the Bay Islands, West Bengal, the Punjab (I), west Rajasthan and the Arabian Sea Islands. It was in slight excess in south Interior Mysore, in moderate excess in Orissa, east Madhya Pradesh, the Konkan, coastal Andhra Pradesh, and Rayalaseema and in large excess over the rest of the country outside Himachal Pradesh.

The mean maximum temperature was below normal in sub-Himalayan West Bengal, Orissa, Bihar Plateau, Uttar Pradesh, east Rajasthan, Madhya Pradesh, Gujrati Region, Madhya Maharashtra, Marathwada, Vidarbha, Telangana and north Interior Mysore and normal over the rest of the country outside Himachal Pradesh. The mean minimum temperature was above normal in Uttar Pradesh and normal elsewhere over the the country outside Himachal Pradesh.

The mean relative humidity in the morning was above normal in Bihar Plateau, Uttar Pradesh, the Punjab (I), Rajasthan, Madhya Pradesh, Madhya Maharashtra, Marathwada, Vidarbha, Telangana and north Interior Mysore below normal in Jammu and Kashmir and normal over the rest of the country outside Himachal Pradesh.

The mean cloud amount in the morning was below normal in west Rajasthan normal in the Bay Islands, Gangetic West Bengal, the Punjab (I), Jammu and Kashmir, Saurashtra and Kutch, the Konkan Rayalaseema, the Madras State, south Interior Mysore and Kerala and above normal over the rest of the country outside Himachal Pradesh.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 31 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. IST of the date noted in the succeeding column. Similarly the heaviest fall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hrs. IST of the date given in the succeeding column.

TABLE III.—SUMMARY OF OBSERVATIONS AT FIXED HOURS—OCTOBER, 1961 (ASVINA 9—KARTIKA 9, 1883 SAKA)

(2) Register not received.

*Data not reliable.

[†]Data included under 'Nepal'.

MONTHLY MEANS OF UPPER WINDS

October 1961 (Asvina 9—Kartika 9, 1883 Saka)

During the month, observations of velocity and direction of upper winds were made at 53 stations in India. Out of these, at 41 stations all the observations were taken by means of pilot balloons and at 12 stations some observations were made by means of pilot balloons while the other observations by the radiowind method. Particulars of the stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the table overleaf. All radiowind ascents have been indicated by means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data up to 9.0 km. a. m. s. l. are given under Table IV and data above 9.0 km. a. m. s. l. under Table V.

In Tables IV and V :

n—represents the number of observations ;

V—represents the mean wind speed in metres per second irrespective of direction ;

v—represents the resultant mean velocity in metres per second ;

D—represents the direction of the resultant mean wind in degrees East of North.

Mean and resultant winds are given in this publication for the following heights :

Surface, 0.15 km. a. g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0 and 36.0 km. a. m. s. l. Of these, the levels 1.5, 3.0, 5.4, 7.2, 9.0, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0 and 30.0 km. a. m. s. l. are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150, 100, 70, 50, 30, 20 and 10 mb. respectively.

RADIOSONDE DATA**List of Radiosonde Stations in India**

During the month, observations of upper air temperature, pressure and humidity were made at 13 stations in India as given in the list below. For a detailed description of the instruments used, a reference may be made to the I. M. D. Scientific Notes Nos. 112 and 113 (Volume IX).

LIST OF RADIOSONDE STATIONS IN INDIA

| Serial No. | Name of Station | Type of instrument used | Date of starting | Hours of routine observations in GMT during the month | Remarks |
|------------|-----------------|-------------------------|---------------------|---|--|
| 1 | Ahmedabad | Fan type | 20th July, 1961 | 00 and 12 | |
| 2 | Allahabad | Clock type | 1st October, 1944 | 00 and 12 | |
| 3 | Bangalore | Fan type | 10th March, 1961 | 00 and 12 | |
| 4 | Bombay | Clock type | 7th September, 1954 | 00 and 12 | |
| 5 | Calcutta | Clock type | 13th December, 1946 | 00 and 12 | Fan type used from 13-12-46 to 30-11-47. |
| 6 | Gauhati | Clock type | 22nd July, 1955 | 00 and 12 | |
| 7 | Jodhpur | Clock type | 17th April, 1946 | 00 and 12 | |
| 8 | Madras | Fan type | 29th June, 1946 | 00 and 12 | |
| 9 | Nagpur | Fan type | 1st October, 1946 | 00 and 12 | |
| 10 | New Delhi | Clock type | 3rd December, 1943 | 00 and 12 | |
| 11 | Port Blair | Fan type | 4th December, 1946 | 00 and 12 | |
| 12 | Trivandrum | Fan type | 1st July, 1947 | 00 and 12 | |
| 13 | Visakhapatnam | Fan type | 8th December, 1946 | 00 and 12 | |

Note.—Number of observations refer to those of dynamic height.

Means are not worked out for temperature and dew point for the 1000 mb surface and for dew point for standard pressure surfaces with temperatures less than 273 °A.

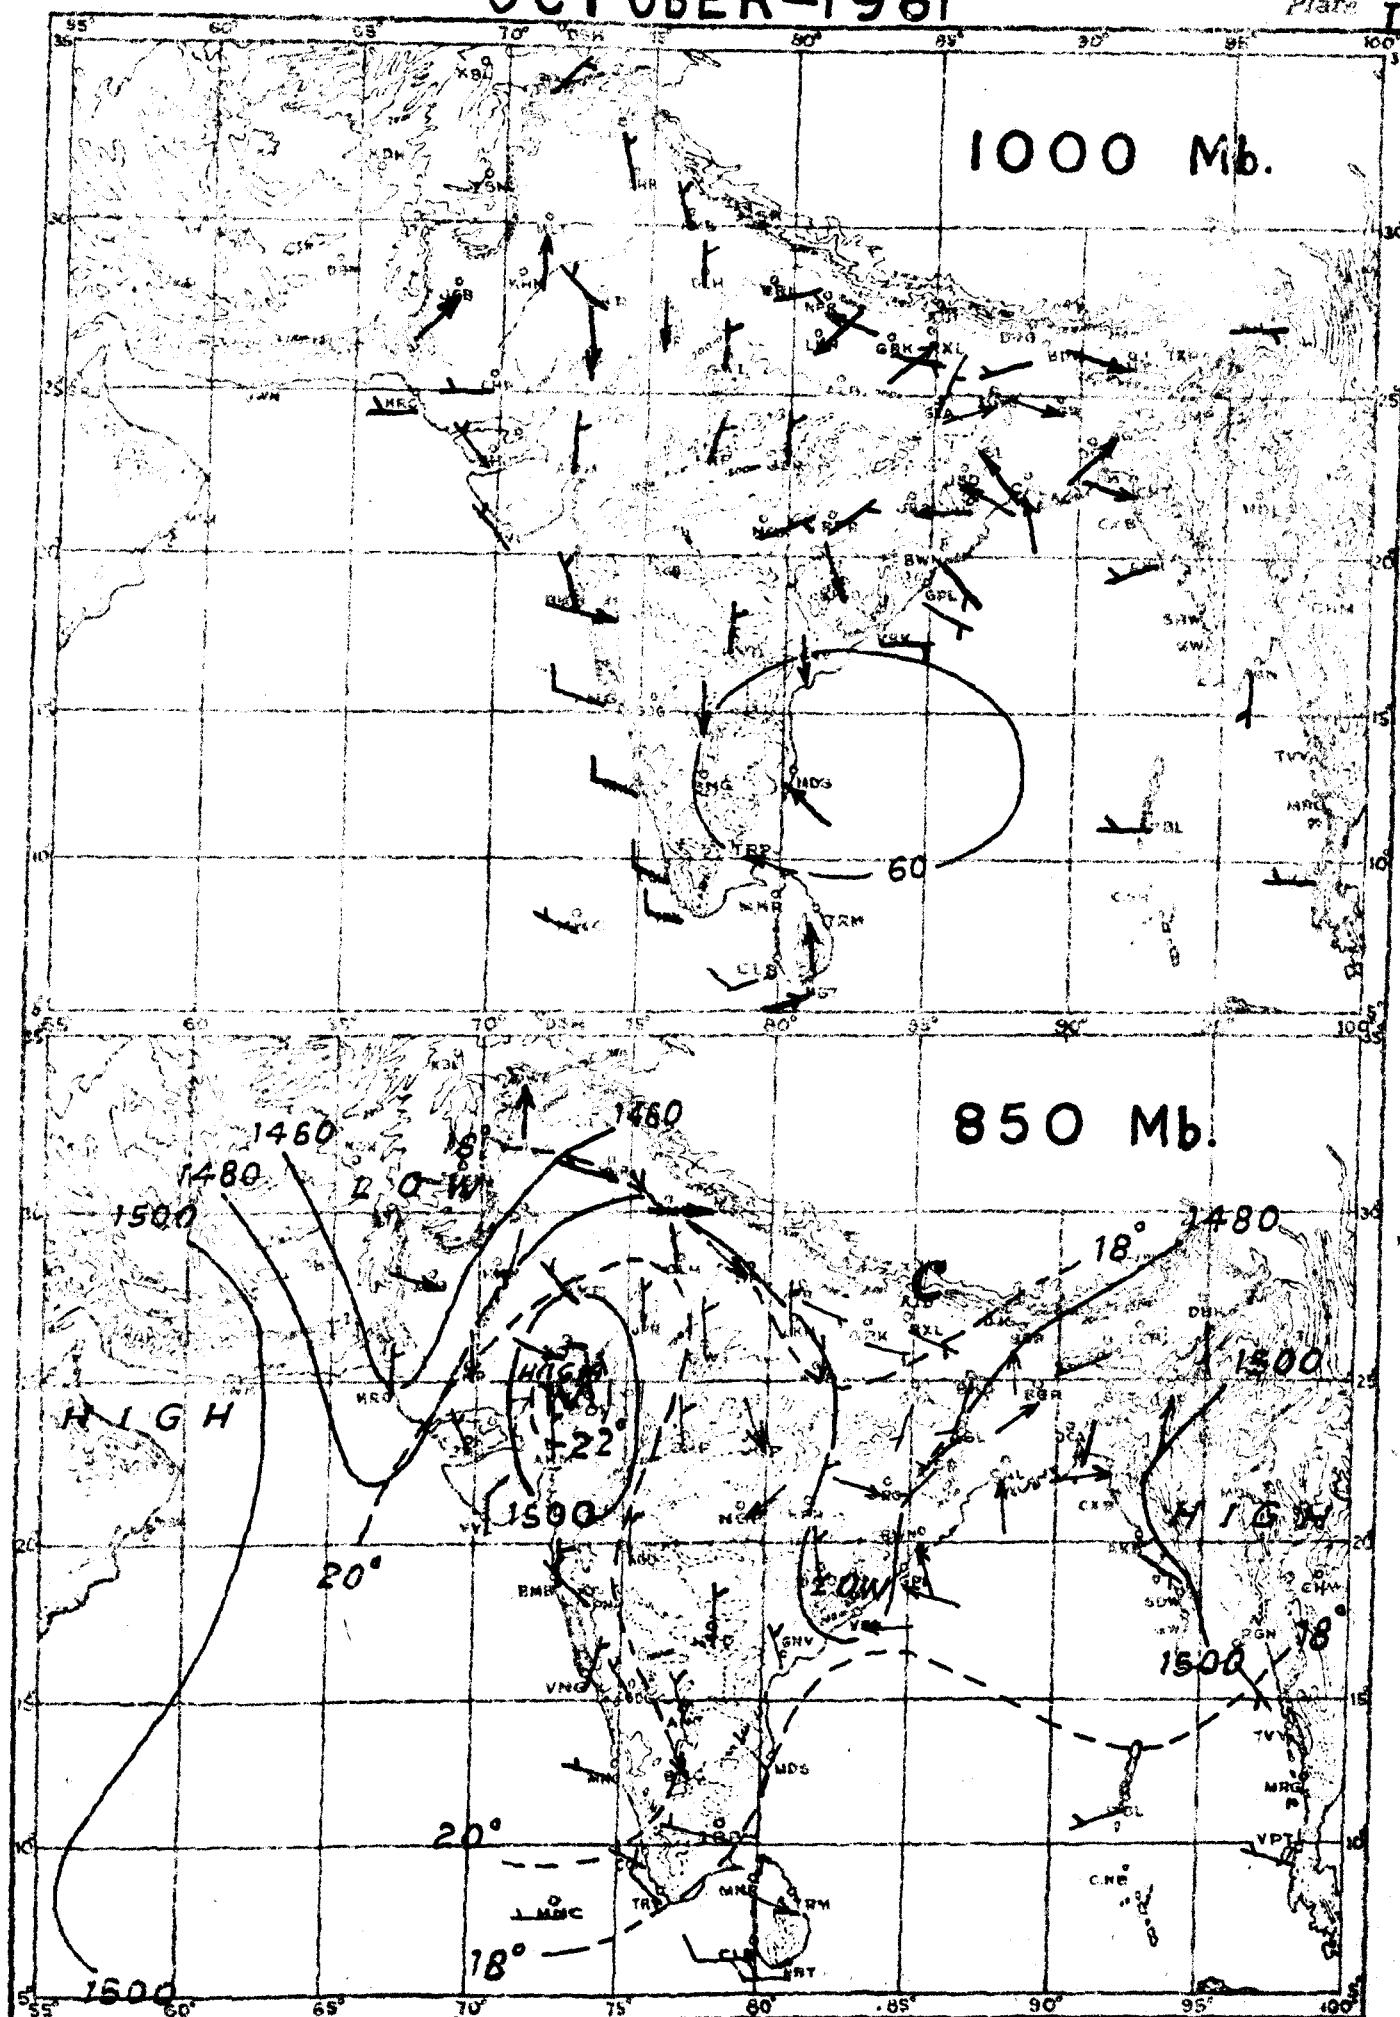

Means are not worked out for less than five observations at standard pressure surfaces.

INDIA WEATHER REVIEW, 1961

Monthly Weather Report NOVEMBER

Published by authority of the Government of India

ATMOSPHERIC SCIENCES
LIBRARY

MAR 1 1967

E. S. S. A.
U. S. Dept. of Commerce

Chief features—

- (i) Passage of three active western disturbances; and
- (ii) A prolonged spell of dry weather over the south Peninsula during the second half of the month.

The western disturbance that lay over the Punjabs on 29th October moved away eastwards across the Western Himalayas on 2nd November. A residual upper air cyclonic circulation, however, persisted over west Uttar Pradesh and neighbourhood till 7th and then moved away eastwards across Assam by 10th. Under its influence rain or snow occurred locally in Himachal Pradesh on 1st and at a few places in the hills of west Uttar Pradesh on 1st, 2nd and 8th. Scattered thundershowers accompanied by hail were also reported from Madhya Pradesh on three days in the first week of the month. According to press report, the hailstorms caused considerable damage to standing crops and death of a few persons and some cattle.

Under the influence of the easterly wave that moved across the south Peninsula towards the end of October, fairly widespread rain occurred in the extreme south Peninsula on 1st and 2nd. The rainfall gradually extended northeastwards to north coastal Andhra Pradesh, Telangana and Orissa by 4th and west Bengal and Assam by 6th. Cuddalore and Nellore reported 7 cm of rain each on 3rd and Ramagundam 7 cm and Hanamkonda 6 cm on 5th.

A well marked trough of low pressure developed over the south and central Bay of Bengal on 6th and persisted there till 8th. Under its influence, fairly widespread showers occurred in the Bay Islands between 6th and 8th. Port Blair reported 8 cm of rain on 6th and 7th and Maya Bandar and Long Island 10 cm each on 7th.

The rainfall activity increased over the south Peninsula between 12th and 16th. Rain or thundershowers were fairly widespread in the Madras State on 12th, 14th and 15th and occurred locally in Kerala on 13th, 15th and 16th and in the Madras State on 13th and 16th. Kanyakumari and Tuticorin reported 10 cm of rain each on 15th and 16th respectively.

A western disturbance moved into north Baluchistan on 13th. It lay over the Punjabs and north Rajasthan on 15th and moved away across the hills of the Punjab(I) and of west Uttar Pradesh on 17th. In association with it, thundershowers occurred locally in east Rajasthan on 15th. Rain or snow was local in Jammu and Kashmir on 16th and in Himachal Pradesh on 17th.

Another western disturbance lay over Baluchistan on 25th. Moving slowly eastnortheastwards, it lay over the Punjab (P) on 26th and the Punjab (I) on 27th and moved away eastwards across the Punjab hills and Himachal Pradesh on 28th. It caused a good spell of rain or snow in Jammu and Kashmir, the Punjab(I) and Himachal Pradesh on 27th and 28th. A few thundershowers were also reported from west Rajasthan and west Uttar Pradesh on 27th. Dalhousie reported 5 cm of rain on 27th.

Weather remained mainly dry over the south Peninsula between 17th and 29th. A low pressure wave from the east that moved across the Comorin area on 30th broke this spell and revived the northeast monsoon rains over the Madras State where fairly widespread showers occurred on that day.

Night temperatures were generally below normal in west Rajasthan during the first week and above normal in east Rajasthan during the second week and in west Madhya Pradesh during the first fortnight. In the wake of the western disturbance that moved across the Western Himalayas on 17th, night temperatures fell below normal in northwest India and west Uttar Pradesh on 18th, being appreciably so in north Rajasthan. The area of below-normal minimum temperature shifted by 20th to northeast India, where night temperatures continued below normal till the end of the month. Night temperature rose ahead of the last western disturbance and were

© 1961 by Manager of Publications, Government of India, Delhi-8".

above normal in northwest India and neighbourhood, being appreciably so in the Punjab(I) and north Rajasthan on 26th and 27th, and in northwest Madhya Pradesh on 27th and 28th. In the rear of the disturbance they again fell below normal in the Panjab(I) and north Rajasthan on 30th.

The rainfall for the month was in large excess in the Panjab(I), Jammu and Kashmir and Telangana, in slight excess in the Bay Islands and normal in Assam, west Madhya Pradesh, coastal Andhra Pradesh and the Arabian Sea Islands. It was in slight defect in west Uttar Pradesh, east Madhya Pradesh, in moderate defect in Rajasthan, the Madras State and Kerala and in large defect in West Bengal, Orissa, Bihar State, east Uttar Pradesh, the Maharashtra State, Rayalaseema and the Mysore State. There was no rain over the rest of the country outside Himachal Pradesh.

The mean maximum temperature was above normal in the Bay Islands, coastal Mysore, Kerala and the Arabian Sea Islands, below normal in West Bengal, Orissa, Bihar Plateau, Uttar Pradesh, the Punjab(I), Jammu and Kashmir, Rajasthan and normal over the rest of the country outside Himachal Pradesh. The mean minimum temperature was above normal in the Bay Islands, west Madhya Pradesh and Gujarat Region and normal over the rest of the country outside Himachal Pradesh.

The mean relative humidity in morning was above normal in the Bay Islands, Uttar Pradesh, the Punjab (I), east Rajasthan, west Madhya Pradesh and north Interior Mysore, below normal in Jammu and Kashmir and coastal Mysore and normal over the rest of the country outside Himachal Pradesh.

The mean cloud amount in the morning was above normal in Assam, west Uttar Pradesh, the Punjab(I), Jammu and Kashmir, east Rajasthan, west Madhya Pradesh, Gujarat Region, Madhya Maharashtra, Vidarbha, the Madras State, the Mysore State and the Arabian Sea Islands, below normal in Gangetic West Bengal, Orissa, Bihar State, west Rajasthan and east Madhya Pradesh and normal over the rest of the country outside Himachal Pradesh.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 31 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. IST of the date noted in the succeeding column; Similarly the heaviest fall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hrs. IST of the date given in the succeeding column.

POONA 5,
The 29th January 1962.

R. ANANTHAKRISHNAN,
for Director General of Observatories.

Errata to M.W.R. for November, 1961 (Kartika 10 - Agrahayana 9, 1883 Saka)

MONTHLY MEANS OF UPPER WINDS

During the month, observations of velocity and direction of upper winds were made at 53 stations in India. Out of these, at 41 stations all the observations, were taken by means of pilot balloons and at 12 stations some observations were made by means of pilot balloons while the other observations by the radiowind method. Particulars of these stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the table overleaf. All radiowind ascents have been indicated by means of an asterisk(*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data upto 9.0 km. a.m.s.l. are given under Table IV and data above 9.0 km. a.m.s.l. under Table V.

In Tables IV and V :

n—represents the number of observations;

V—represents the mean wind speed in metres per second; irrespective of direction;

v—represents the resultant mean velocity in metres per second;

D—represents the direction of the resultant mean wind in degrees East of North.

Mean and resultant winds are given in this publication for the following heights :

Surface, 0.15 km. a.g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0 and 36.0 km. a.m.s.l. Of these the levels 1.5, 3.0, 5.4, 7.2, 9.0, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0 and 30.0 km. a.m.s.l. are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150, 100, 70, 50, 30, 20 and 10 mb. respectively.

PARTICULARS OF PILOT BALLOON AND RAWIN STATIONS IN INDIA

| Station | Lat. N. | Long. E. | Height of anemometer head a.m.s.l. in metres | Date of opening | Approximate times of flight (I.S.T.) | | |

RADIOSONDE DATA

November 1961 (Kartika 10—Agrahayana 9, 1883 Saka)

During the month, observations of upper air temperature, pressure and humidity were made at 13 stations in India as given in the list below. For a detailed description of the instruments used, a reference may be made to the I.M.D. Scientific Notes Nos. 112 and 113 (Volume IX).

LIST OF RADIOSONDE STATIONS IN INDIA

| S. No. | Name of Station | Type of instrument used | Date of starting | Hours of routine observations in G.M.T. during the month | Remarks |
|--------|-----------------|-------------------------|---------------------|---|---------|
| 1 | Ahmedabad | Fan type | 20th July 1961 | 00 and 12 | |
| 2 | Allahabad | Clock type | 1st October, 1944 | 00 and 12 | |
| 3 | Bangalore | Fan type | 10th March, 1961 | 00 and 12 | |
| 4 | Bombay | Clock type | 7th September, 1954 | 00 and 12 | |
| 5 | Calcutta | Clock type | 13th December, 1946 | 00 and 12 | |
| 6 | Gauhati | Clock type | 22nd July, 1955 | 00 and 12 | |
| 7 | Jodhpur | Clock type | 17th April, 1946 | 00 and 12 | |
| 8 | Madras | Fan type | 29th June, 1946 | 00 and 12 | |
| 9 | Nagpur | Fan type | 1st October, 1946 | 00 and 12 | |
| 10 | New Delhi | Clock type | 3rd December, 1943 | 00 and 12 | |
| 11 | Port Blair | Fan type | 4th December, 1946 | 00 and 12 | |
| 12 | Trivandrum | Fan type | 1st July, 1947 | 00 and 12 | |
| 13 | Visakhapatnam | Fan type | 8th December, 1946 | 00 and 12 | |

Fan type used from
13th December, 1946 to
30th November, 1947.

INDIA WEATHER REVIEW, 1961

Monthly Weather Report December

 ATMOSPHERIC SCIENCES
LIBRARY

Published by authority of the Government of India

Price 7/- 1867

Chief feature :

An unusually long spell of moderate to severe cold wave conditions over Uttar Pradesh, Bihar State and north Madhya Pradesh, during the second half of the month in the wake of an active western disturbance that moved across the country between 17th and 20th.

The low pressure wave from the east that was passing westwards across the Comorin area on 30th November, moved westwards, across the Laccadive Maldives area on 1st December. It weakened and became unimportant on 2nd. Under its influence, northeast monsoon rains revived over the south Peninsula. Rain or thundershowers were fairly widespread in the Madras State and occurred locally in Kerala on 1st, Alleppey reporting 7 cm and Kodaikanal 6 cm of rain. In association with an upper air trough that developed over the southeast Bay of Bengal on the evening of 1st and moved westwards across the south Peninsula on 3rd, fairly widespread rain occurred in the south Madras State on 4th and in the Madras State and Kerala on 5th. Nagapattinam reported 10 cm of rain and Vedaranyam 8 cm on 4th and Kodaikanal 11 cm and Tuticorin and Coonoor 9 cm each on 5th. Scattered showers occurred in the Madras State on most of the days between 8th and 15th. Weather remained mainly dry over the south Peninsula during the second half of the month.

A trough in the low level easterlies extending from the north Konkan to east Uttar Pradesh developed on 9th and persisted over the central parts of the country till 15th. Under its influence, moist air from the Bay of Bengal penetrated inland and a few showers occurred over the central parts of the country between 10th and 12th. Sconi reported 4 cm of rain on 11th and Mandla 3 cm on 12th. Scattered thundershowers occurred in Maharashtra State on 21st and 22nd in association with a feeble upper air trough which extended from the Konkan to southwest Madhya Pradesh.

Rainy weather prevailed over the south Bay Islands during the month but for a break between 7th and 16th. The rainfall extended to the north Bay Islands also between 23rd and 27th. A few heavy rainfall amounts reported were Kondul 6 cm on 17th, Car Nicobar 9 cm on 25th, Long Island 7 cm each on 26th and 27th and Kondul 7 cm on 30th.

An active western disturbance lay over Baluchistan on 15th and the Punjab (I) on 17th. It moved into the Nepal Himalayas by 18th and then moved eastwards across Assam by 20th. An induced low developed over east Rajasthan on 17th. It moved into northeast Madhya Pradesh on 18th and later moved away across Assam by 20th. In association with these two systems, rain or snow was fairly widespread in the Punjab (I) and Himachal Pradesh on 17th and 18th and in Uttar Pradesh on 18th and occurred locally in Jammu and Kashmir on 17th and 18th. Local or scattered showers also occurred in Madhya Pradesh between 17th and 19th and in Bihar State on 18th and 19th. The chief amounts of rainfall reported were : Joshimath 7 cm on 17th and Dehra Dun 5 cm and Najibabad, Roorkee, Munshyari, Simla and Dharchula 4 cm each on 18th. According to press reports, Mussoorie and some other hill stations were temporarily cut off from the plains due to blocking of roads by heavy snowfall.

Another feeble western disturbance moved into Baluchistan on 28th evening. It lay as a sea level low over the northern divisions of West Pakistan on 30th and moved away across Jammu and Kashmir on 31st. Under its influence, a few showers of rain or snow occurred in Jammu and Kashmir on 31st.

Night temperatures were generally below normal over north India during the first half of the month. They were appreciably so in Rajasthan on 6th and 7th. The area over which minimum temperatures were apparently below normal shifted eastwards to east Uttar Pradesh and Bihar State

"Copyright © 1961 by Manager of Publications, Government of India, Delhi-8."

on 8th and Gangetic West Bengal on 9th. Ahead of the western disturbance, temperatures started rising on 16th and became appreciably above normal in Uttar Pradesh on 18th. However, in the wake of the disturbance cold continental air spread over north India. Extensive morning fog and moderate to severe cold wave conditions with night temperatures 6 to 8°C below normal and day temperatures 8 to 12°C below normal were experienced at a number of places in Uttar Pradesh, Bihar State and north Madhya Pradesh between 21st and 28th. Temperatures fell below the freezing point at a number of places resulting in the bursting of water mains. According to press reports, more than 700 people died in Uttar Pradesh and Bihar State as a result of this cold wave. There was also considerable damage to crops. Air Services to and from Delhi were dislocated due to extensive foggy conditions. The unique feature of this cold wave was its persistency over large areas and for long period.

Night temperatures were nearly normal over the south Peninsula during the month. They were generally above normal over the north Peninsula except during the last week when they were normal or below normal.

The rainfall for the month was in large excess in Bihar Plains, Uttar Pradesh, east Madhya Pradesh and the Arabian Sea Islands and normal in Bihar Plateau and the Punjab (I). It was in slight defect in west Madhya Pradesh, the Madras State and Kerala, in moderate defect in Assam, Orissa, Jammu and Kashmir, west Rajasthan, Gujarat Region, Madhya Maharashtra, Marathwada and Vidarbha and in large defect in the Bay Islands, West Bengal, east Rajasthan, the Konkan, coastal Andhra Pradesh, and the Mysore State. There was no rain over the rest of the country outside Himachal Pradesh.

The mean maximum temperature was above normal in the Bay Islands, below normal in West Bengal, Orissa, Bihar State, Uttar Pradesh, the Punjab(I), Jammu and Kashmir, Rajasthan, Madhya Pradesh and normal over the rest of the country outside Himachal Pradesh. The mean minimum temperature was below normal in West Bengal, Orissa, Bihar State, Uttar Pradesh, the Punjab(I), Jammu and Kashmir, Rajasthan, Madhya Pradesh, Saurashtra and Kutch and normal over the rest of the country outside Himachal Pradesh.

The mean relative humidity in the morning was above normal in the Bay Islands, west Uttar Pradesh, the Punjab(I), east Rajasthan, north Interior Mysore and the Arabian Sea Islands, below normal in Assam and Jammu and Kashmir and normal over the rest of the country outside Himachal Pradesh.

The mean cloud amount in the morning was above normal in Sub-Himalayan West Bengal, Bihar Plains, Uttar Pradesh, east Rajasthan, west Madhya Pradesh, the Maharashtra State, Rayalseema, the Madras State, coastal and north Interior Mysore, Kerala and the Arabian Sea Islands, below normal in Gangetic West Bengal, Orissa, Bihar Plateau and coastal Andhra Pradesh and normal over the rest of the country outside Himachal Pradesh.

Table I contains the divisional and sub-divisional means of rainfall, temperature, humidity and cloud amount for the 15 chief political divisions and the 31 sub-divisions. The stations whose observations are used for preparing these means are given in the subsequent tables.

The highest maximum temperature given for any station in the accompanying tables is that recorded within the 24 hours ending at 0830 hrs. IST of the date noted in the succeeding column. Similarly the heaviest fall in 24 hours for any station denotes the amount recorded during the 24 hours ending at 0830 hrs. IST of the date given in the succeeding column.

MONTHLY MEANS OF UPPER WINDS

December 1961 (Agrahayana 10—Pausa 10, 1883 Saka)

During the month, observations of velocity and direction of upper winds were made at 53 stations in India. Out of these, at 40 stations all the observations were taken by means of pilot balloons and at 12 stations some observations were made by means of pilot balloons while the other observations by the radiowind method. In the case of Bangalore, the observations were taken by following radiosonde balloon by means of an optical theodolite. Particulars of the stations, their co-ordinates and the approximate times of the regular pilot balloon and rawin ascents at each station are given in the table overleaf. All radiowind ascents have been indicated by means of an asterisk (*) against the scheduled hours.

Data from ascents made at the scheduled time or within two hours on either side of the scheduled times of regular observations have been used for averaging.

Data upto 9.0 km. a. m. s. l. are given under Table IV and data above 9.0 km. a. m. s. l. under Table V.

In Tables IV and V :

n—represents the number of observations,

V—represents the mean wind speed in metres per second, irrespective of direction,

v—represents the resultant mean velocity in metres per second,

D—represents the direction of the resultant mean wind in degrees East of North.

Mean and resultant winds are given in this publication for the following heights :

Surface, 0.15 km. a. g., 0.3, 0.6, 0.9, 1.5, 2.1, 3.0, 3.6, 4.5, 5.4, 6.0, 7.2, 9.0, 10.5, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0, 30.0, 33.0 and 36.0 km. a. m. s. l. Of these, the levels 1.5, 3.0, 5.4, 7.2, 9.0, 12.0, 14.1, 16.2, 18.0, 21.0, 24.0, 27.0 and 30.0 km. a. m. s. l. are considered as the best approximations to the standard pressure levels 850, 700, 500, 400, 300, 200, 150, 100, 70, 50, 30, 20 and 10 mb. respectively.

RADIOSONDE DATA

During the month, observations of upper air temperature, pressure and humidity were made at 13 stations in India as given in the list below. For a detailed description of the instruments used, a reference may be made to the I. M. D. Scientific Notes Nos. 112 and 113 (Volume IX).

LIST OF RADIOSONDE STATIONS IN INDIA

| S. No. | Name of station | Type of instrument used | Date of starting | Hours of routine observations in GMT during the month | Remarks |
|--------|-----------------|-------------------------|--------------------|---|--|
| 1 | Ahmedabad | Fan type | 20th July 1961 | 00 and 12 | |
| 2 | Allahabad | Clock type | 1st October 1944 | 00 and 12 | |
| 3 | Bangalore | Fan type | 10th March 1961 | 00 and 12 | |
| 4 | Bombay | Clock type | 7th September 1954 | 00 and 12 | |
| 5 | Calcutta | Clock type | 13th December 1946 | 00 and 12 | Fan type used from 13th December, 1946 to 30th November, 1947. |
| 6 | Gauhati | Clock type | 22nd July 1955 | 00 and 12 | |
| 7 | Jodhpur | Clock type | 17th April 1946 | 00 and 12 | |
| 8 | Madras | Fan type | 29th June 1946 | 00 and 12 | |
| 9 | Nagpur | Fan type | 1st October 1946 | 00 and 12 | |
| 10 | New Delhi | Clock type | 3rd December 1943 | 00 and 12 | |
| 11 | Port Blair | Fan type | 4th December 1946 | 00 and 12 | |
| 12 | Trivandrum | Fan type | 1st July 1947 | 00 and 12 | |
| 13 | Visakhapatnam | Fan type | 8th December 1946 | 00 and 12 | |

| 10 | .. | .. | .. | .. | .. | .. |

NOTE : Number of observations refer to those of dynamic height.

Means are not worked out for temperature and dew point for the 1000 mb surface and for standard pressure surfaces with temperatures less than 273°A,

Means are not worked out for less than five observations at standard pressure surfaces.

MONTHLY MEAN CONSTANT PRESSURE CHARTS

DECEMBER-1961

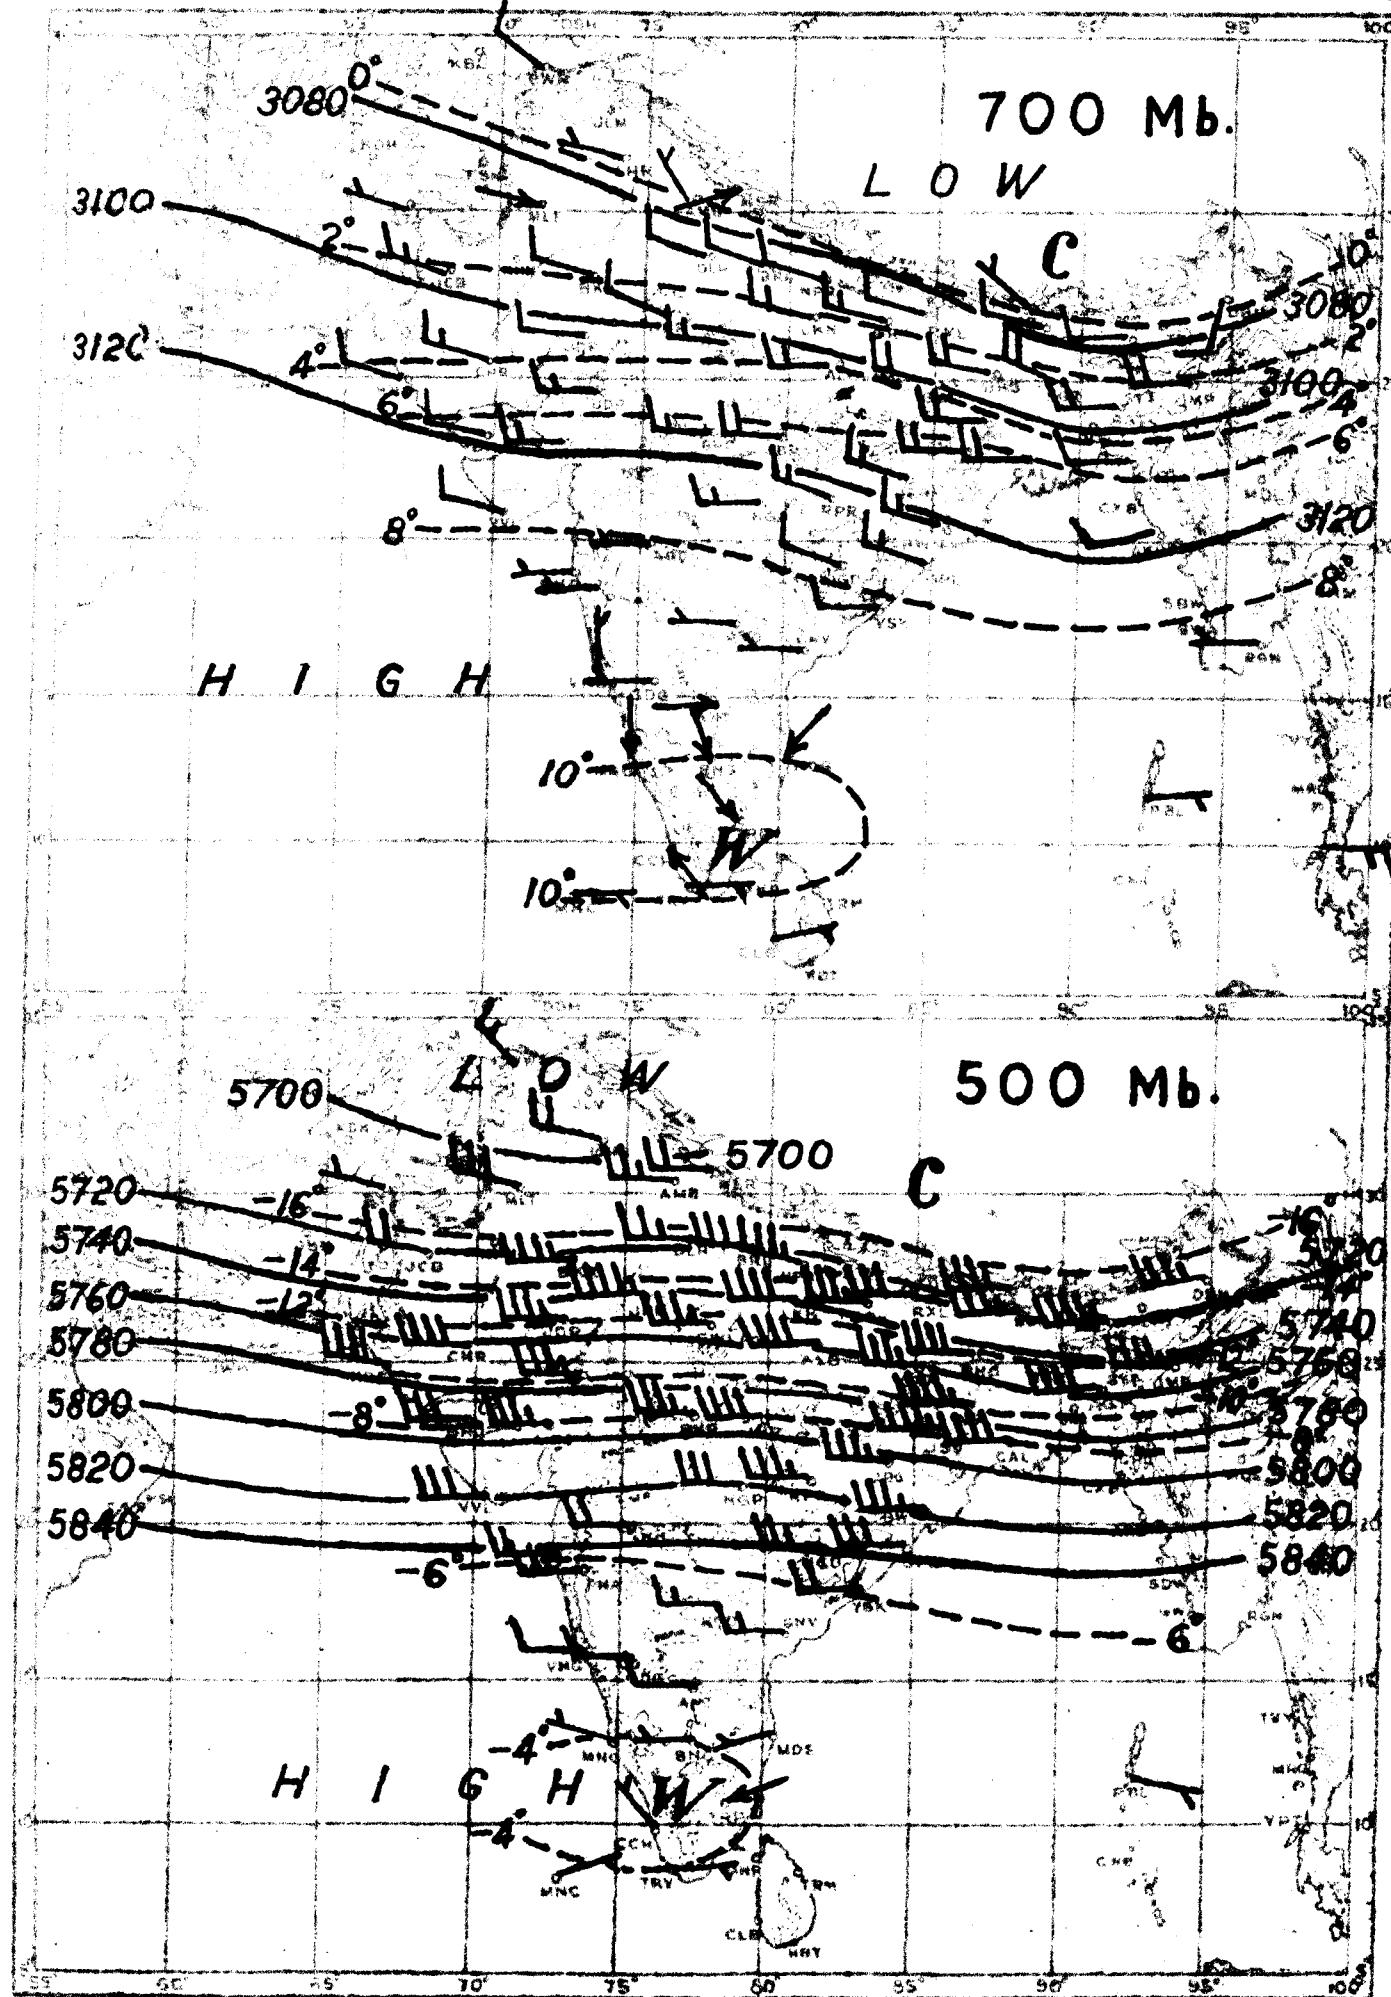

RESULTANT WIND — 5 Knots, — 10 Knots, — 50 Knots
Isotherms in degrees centigrade — Contours in geopotential metres.

0500/2394 (1) : 10 : 65
G.P.O. P. POONA, 1966
